

What's new in Mediasite 5.0?

EX Server Software

Mediasite Players

- **Revamped Players** (formerly Viewers) set the bar for watching rich media presentations
- **On-slide magnifier** hovers and enlarges image detail anywhere on a slide
- **"Email presentation"** marks important or favorite content clips at a specific time and shares the link with other authorized users
- **Enhanced video speed control**
- **Video skip back**
- **Enhanced thumbnail navigation**
- **Closed captioning** for all Mac® -supported browsers
- **Publish-to-go for Macs** supports playback without Internet access

Reporting

- **More viewing statistics** allow content owners, managers and others with permission to track, measure and analyze additional trends
- **Graphics** of key playback and server stats show viewing patterns and trends at-a-glance
- **Enhanced search and filtering** criteria refine data extraction
- **Enhanced exports** simplify and improve analysis with other tools
- **Additional report security** for private and public audiences
- **Customize and save reports** for convenient re-use

Mediasite Management Portal

- **New Presentation Explorer** streamlines portal navigation with a familiar tree view and functions
- **Enhanced search and filter** criteria save time searching for presentations and presentation assets
- **Microsoft® Outlook® calendar support** allows recipients of presentation invitations to immediately add the event to their Outlook calendar
- **Email Q&A** displays submitted questions in the online Q&A queue plus sends them to an email address for convenient access from other devices (e.g. handhelds)
- **Moderator view** provides authorized users access to only Q&A moderation functions

Mediasite
Players set the
bar for watching
rich media
presentations

Mediasite Catalog

- **Multiple Catalogs** per Mediasite Server expand and streamline content publishing options
- **Hierarchical folders** optimize content organization and save time when browsing Catalogs
- **Flexible presentation publishing** allows content to be published to any number of custom Catalogs and folders while maintaining all necessary access and viewing permissions
- **Enhanced search, filter and sort** criteria further customize Catalog search results
- **Edit-in-place** capabilities save time when creating and customizing online Catalogs
- **Presentation links** provide Catalog access to additional related materials and websites
- **RSS feeds** allow authorized users to subscribe to and receive content of interest
- **Friendly Catalog URLs** are easily emailed or embedded in other web pages
- **Catalog page themes**

Mediasite Recorder Software

- **Pause** and resume live or on-demand recordings as often as needed to accommodate breaks, intermissions or other unwanted content
- **High motion video support** allows operators to switch high motion video shown in the image window to the video window without the expense of external switching equipment
- **Low audio indicator** reduces operator error or oversight, ensuring a quality recording

Mediasite Editor

- **Cut video anywhere** in a recorded presentation and select preferred cut type/transition (hard, soft fade, dissolve)
- **Instant slide editing** immediately updates a presentation with slides edited in an external image editor
- **Timeline-based** editing environment streamlines navigation and editing tasks for less post-production and quicker content publishing
